

Classroom Activity Design Sprint

Day 3 • Your turn

*Everything you have done for two days was someone's design.
Today you are the designer.*

The brief

Design an IoT + AI activity **for your own students, in your own subject, in your own room.**

Not for an ideal class. For the class you actually have on a Tuesday afternoon.

By 14:30 it must be **runnable**: another group will play it as your students — including the awkward ones.

Three constraints (they are the creative fuel)

1 • Cheap — under 200 DKK in materials beyond the micro:bit

2 • Safe to fail — a student who breaks it learns something; nothing is ruined

3 • Genuinely playful — a student would choose to keep going after the bell

If your idea fights a constraint, the constraint wins. Redesign.

The design canvas (one per group, A3)

Field	Forces you to decide
Class + subject	who exactly is this for?
Core concept	what is the ONE idea inside it?
What students do	verbs, not topics
What could go wrong	name your failure modes now
What it simplifies	the transposition check, applied to yourself

The last row is the workshop's whole argument in one cell. **Fill it honestly.**

Raw material on the tables

- Everything from Days 1–2 is remixable: the card deck, the blind tasting, sticky-note trees, the storytelling game, the prompt challenge, the sensor bridge
- **Teachable Machine** — image, audio, pose · **ML for Kids** — worksheets
- **micro:bit CreateAI** — movement models on the device
- **Edge Impulse** — voice-activated micro:bit
- **Cardboard robots** — lofirobot, makeairobots
- The Claude bridge with a rewritten system prompt (*"you are a nervous houseplant"*) is one line of text away from *"you are a lab*

Timeboxes

09:00 – 09:15 — pick partners, pick a class, pick a concept. Decide fast; the canvas will correct you.

09:15 – 10:30 — design on the canvas. Build only what you must to test the idea.

10:30 – 11:00 — standing round: *one minute per group* — what it is, where you're stuck, what you need.

Then the seminar — designed to be useful for exactly where you'll be stuck.

13:00 – 13:45 — finish a runnable version.

13:45 – 14:30 — playtest swap.

The standing round: format

One minute. Three sentences:

1. "**We are building ___ for ___.**"
2. "**We are stuck on ___.**"
3. "**We need ___.**"

Peers and facilitators respond with **resources, not solutions.**

Your stuck point is probably shared by two other groups. Say it out loud.

One more thing

The activity you design today is the one you will run with real students **before October**.

Design something you can actually get away with.

Go.
